

Nelster RELAY TEST BLOCK

Series : NW-RTB

Nelster RELAY TEST PLUG

Series : NW-RTPL

FEATURES

- ❑ Facilities easy in-situ, on-load testing of Relays, Metering and Control Panel without disrupting load circuit.
- ❑ Easy and safe for technicians to isolate Protection Relays, inject test signal and verify system performance.
- ❑ Rugged Construction.
- ❑ Substantially reduces commissioning and routine maintenance.
- ❑ Compatible with other popular brands of Test Plugs.

DESCRIPTION

The housing is robust, high grade phenolic moulding, capable of long, trouble free performance in varied climatic conditions. It is designed and manufactured for indoor application. The terminals are brass, duly nickel plated. The contacts are spring loaded, silver plated and supported by phosphor bronze strips. Each contact is separated with a SRBP shroud. Screws are provided at the rear for terminations. Alternatively, studs with nuts and washers could also be provided. Sealing holes on cover studs are provided to prevent unauthorized access. The front cover can be removed for test purpose and replaced, thereafter. This cover is fitted with a silver plated contact finger to close the trip contact, when inserted. Otherwise, the trip contact would remain open. Thus the contact finger on the cover, completes the entire circuit. Isolation of the trip circuit is feasible by removing the contact finger fitted to cover thus avoiding unwarranted tripping under test conditions.

INSULATION

Conformation to requirements of IS-3231
Tested for 2.5KV. IR value - 100M

MOUNTING

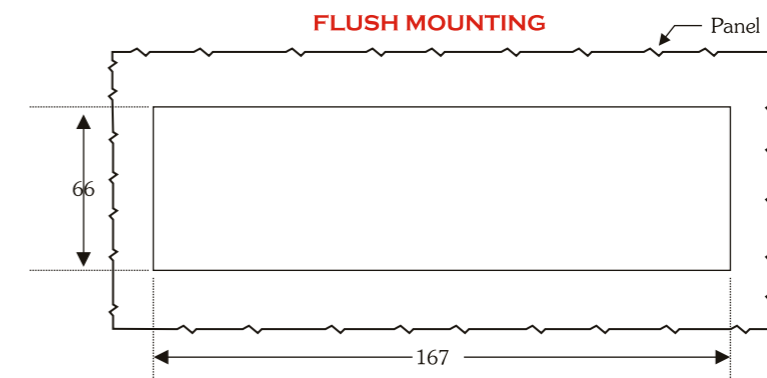

Test Block can be projecting or flush mounted.

OVERALL DIMENSIONS

Height-100mm Width-180mm Depth-88mm

Add 25 mm for Blocks with terminal screws.
or add 40mm for blocks with terminal studs.

(All dimensions are in mm)
